

# The Future of Community Pharmacy: From High Street to Health Hub

The UK Government is shifting health care away from hospitals, empowering community pharmacies as clinical hubs focused on prevention and digital integration to improve patient care.

## THE THREE STRATEGIC SHIFTS

**From Hospital to Community**  
Providing care closer to home to maintain independence and reduce clinical necessity for hospitals.

Current: Hospital Care    Future: Community-based Care

**From Treatment to Prevention**  
Prioritising early intervention and health literacy to reduce avoidable illness deterioration.

Current: Reactive Treatment    Future: Proactive Prevention

**From Analogue to Digital**  
Utilising modern digital infrastructure to improve care delivery and system-wide connectivity.

Current: Analogue Systems    Future: Digital Integration

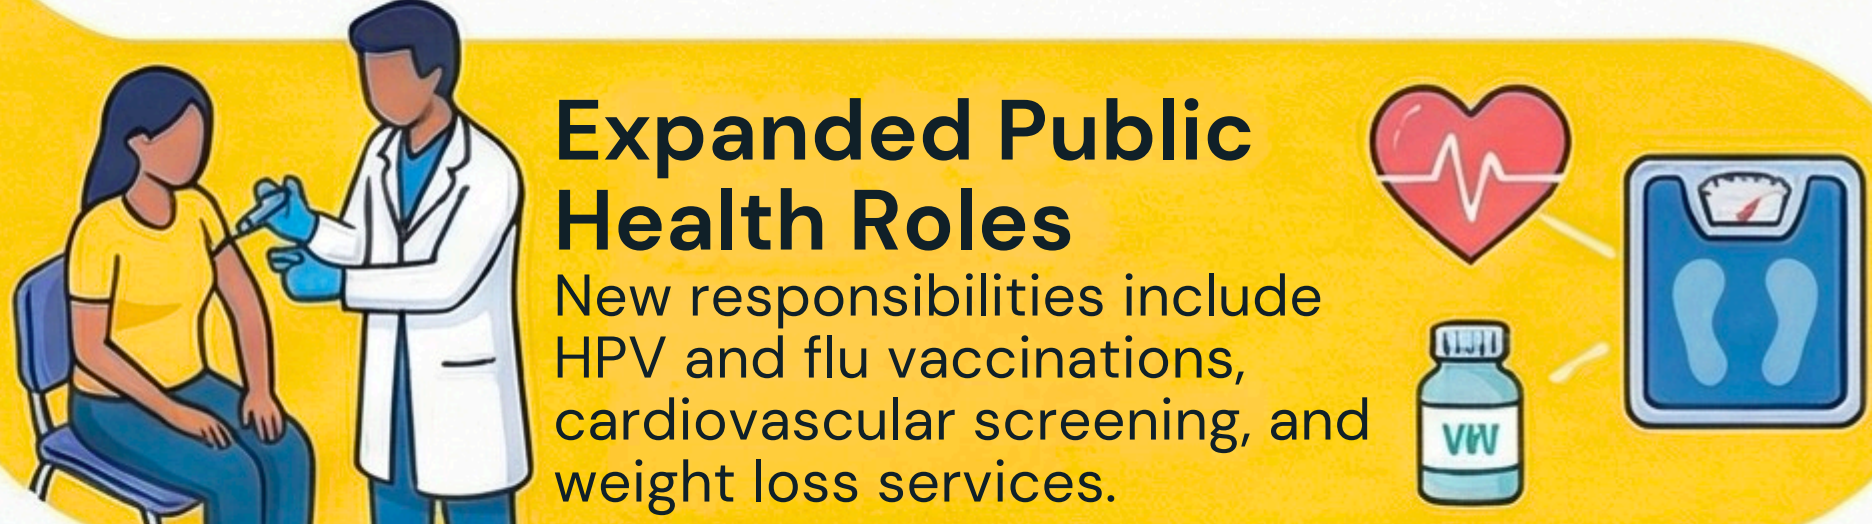

## PHARMACY AS A HEALTH HUB

**Enhanced Clinical Role**  
Pharmacists will have a wider role in managing long-term conditions like obesity, hypertension, and cholesterol.

**Unified Digital Connectivity**  
Use IT to do things once with more clinical information available.

**Expanded Public Health Roles**  
New responsibilities include HPV and flu vaccinations, cardiovascular screening, and weight loss services.
